PROFILE

Final-year Computer Science student at HKU specializing in scalable Spring Boot backends, React frontends, and ML model deployment. Built and shipped production-ready features serving South Asian eHealth communities in multi-language i18n; developed end-to-end OCR pipelines processing thousands of receipts weekly.

WORK EXPERIENCE

PORTALVISION Limited | May 2025 – Aug 2025

Software Engineer Intern

- Built multilingual i18n module for React.js eHealth app serving South Asian communities; shipped multilingual UI/UX in 4 languages (English, Hindi, Urdu, Nepali)
- Developed full-stack Spring Boot backend for iSocial non-profit management system, integrating SQL database and Jaspersoft reporting to serve NGO caseworkers
- Owned end-to-end feature delivery across React.js frontend and Spring Boot backend; resolved client-reported bugs and shipped UX improvements on weekly sprints

PROJECT EXPERIENCE

University Hall Website | May 2026 – Present

Sole Developer

- Shipped a 7-page React SPA as a WordPress mu-plugin for University Hall, HKU, enabling staff to manage content alongside the React build without a headless CMS
- Built a dark academia design system (Tailwind CSS, Playfair Display, Framer Motion) with zero-TypeScript-error quality maintained throughout development
- Developed interactive floor plan viewer, facility gallery with filters, and multi-step application form for student admissions

Spendify – Personal Finance Tracker | Sep 2025 – Apr 2026

Backend Developer

- Architected Spring Boot RESTful API backend with layered architecture (Controller/Service/Repository), CI/CD pipeline via GitHub Actions deploying to production on every merge to main
- Implemented 7+ RESTful endpoints integrated with Microsoft SQL Server for secure financial data storage; JWT-based authentication protecting user accounts
- Designed OCR receipt-processing pipeline using Tesseract OCR, reducing manual expense entry time by 80% for active beta users

Money Detector | Feb 2024 – Apr 2024

Sole Developer

- Built Android banknote denomination classifier in Java using TensorFlow Lite, processing images directly on-device with no server dependency
- Trained CNN model via Teachable Machine on 500+ banknote images across 8 denomination classes
- Deployed edge ML model achieving 70% accuracy on variable-quality captures, outperforming naive baseline by 30 percentage points

Pose-Monitor | Sep 2023 – Apr 2024

Team Lead

- Led 4-person team to build real-time plank pose monitoring web app in Python and Streamlit; integrated pre-trained MoveNet Lightning pose estimation
- Trained TensorFlow custom classifier on joint position data to distinguish standard plank poses from incorrect form
- Deployed Streamlit app achieving 80% pose classification accuracy with 200ms average inference latency for real-time user feedback

EDUCATION

The University of Hong Kong | Sep 2024 – Jun 2026

Bachelor of Engineering in Computer Science

HKU School of Professional and Continuing Education | Sep 2022 – Aug 2024

Associate of Engineering in Computer Science

GPA: 3.72/4.0

Honours: Distinction classification; Principal's Honours List (2023, 2024)

SKILLS

Languages: Cantonese (native); Mandarin, English (fluent)

Programming Languages: Python, Java, C++, TypeScript, JavaScript, PHP, SQL, R

Frameworks: Spring Boot, React.js, Django, TensorFlow, PyTorch, Streamlit

Tools & Platforms: Git/GitHub, CI/CD (GitHub Actions), Linux, WordPress, Tailwind CSS, Microsoft SQL Server, MySQL, SQLite
